

## ABSTRACT OF THE DISCLOSURE

An adjustable base is utilized with articulated or adjustable beds of different widths and includes first and second pairs of support brackets with each pair including first and second support brackets in opposing aligned relationship to each other. Each pair of support brackets is fastened at one end to a bed foundation and a second end of each support bracket has an elongated slot for fastening thereto cross rails of a bed-adjusting mechanism. The latter permits the utilization of a single size bed-adjusting mechanism for beds of different widths, permits mixing/matching bed foundations and bed-adjusting mechanisms of different manufacturers, and effects facile assembly.
